ACKNOWLEDGEMENT

First and foremost we would like to express our sincere gratitude to our respected Founder Amma,Mata Amritanandamayi Devi and Chairman Mr. K S Ramasubban IAS(Retd) for their blessings and grace in making our project great success.

We would like to place a record with deep sense of gratitude to our Honorable Principal Dr. T Kannan for having given us the opportunity to pursue B.E., course in this prestigious institution.

We would like to express our sincere thanks to our beloved Head of the Department Dr. P M Siva Raja and Project Coordinator Mrs. S L Jothi Lakshmi, for creating a supportive and a model environment for us to work and build up our innovative skills. We also thank our project Mentor Mr. Anant Raj I for the kind encouragement and moral support, who has been a constant source of inspiration to us.

We wish to express our sincere sense of gratitude to Dr. P M Siva Raja, Head, Department of Computer Science and Engineering and to our Project Guide who enabled us to complete our project successfully.

1.INTRODUCTION

1.1 Project Overview

Objective: -

The main objective is to create an easy-to-use application that can be used by donors to donate their blood to blood banks. Hospitals in need for blood plasma can request blood from blood banks. This application should have a wider reach to appeal to more potential blood donors.

Abstract: -

The application must have a simple accessible interface for donors to register and donate blood to the allocated blood bank. Additionally, they can upload a COVID-19 negative certificate, so that their blood plasma be used for treating COVID-19 patients. The users can create an account that can be used for registration and scheduling appointments at the nearest blood bank for blood donation. Blood banks can look at potential donors and book them for an appointment. The donors who receive these requests can either accept and book an appointment or reject them. Hospitals in need for blood plasma can request blood banks according to their needs. Blood banks can look at requests from hospitals and can either accept or reject them.

1.2 Purpose: -

The main purpose is to connect the donors & the patients by an online application. By using this application, the users can either raise a request for plasma donation or requirement. This system is used if anyone needs a Plasma Donor. It comprises of Admin and User where both can request for a Plasma.

In this system there is something called an active user, which means the user is an Active member of the App and has recovered from Covid 19, only such people are recommended here for Plasma Donation. Both parties can Accept or Reject the request. User has to Upload a Covid Negative report to be able to Donate Plasma.

2.LITERATURE SURVEY

2.1 Existing problem

There has been an increase in demand for blood plasma among hospitals and blood banks as they are additionally used in an experimental treatment for COVID-19. Hence there is a requirement for new infrastructure to facilitate donors, blood banks and hospitals for easier donation and access of blood plasma that could potentially satisfy the excess demand for it to be used for treatment.

2.3 Problem Statement Definition

There has been an increase in demand for blood plasma among hospitals and blood banks. Convalescent plasma therapy uses blood from people who've recovered from an illness to help others recover. This is an experimental form of therapy which is also used to treat COVID-19. Blood donated by people who've recovered from COVID-19 has antibodies to the virus that causes it. The donated blood is processed to remove blood cells, leaving behind liquid (plasma) and antibodies. These can be given to people with COVID19 to boost their ability to fight the virus. As there is no effective anti-viral treatment for COVID-19 there is a higher prevalence of other forms of therapy such as convalescent plasma therapy which has increased the demand for blood plasma.

3.IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviour and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

3.2 Ideation & Brainstorming

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
1 hour to collaborate
2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#)

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

PROBLEM

Creating a hassle-free Application that encourages people to donate plasma

Key rules of brainstorming

To run a smooth and productive session

- Stay in topic
- Encourage wild ideas
- Defer judgment
- Listen to others
- Go for volume
- If possible, be visual

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TIP
You can select a sticky note and hit the pencil button to modify (even to start drawing)

EMPIRE	ANAND RAJ	ANAND BOOJESH	JOOHIB PRAVITHA
Details verification before enrollment for donation	plasma available places nearby	Easy update/ delete donor details	Donor Eligibility (through weight...)
Chat system between donor and patient	Notify the Donor that his/her plasma has been donated to someone	Create a donor database	Step by step procedure guide
Integration with social medias	Contact of Emergency	Report if any issues occurs	Gathering donor's details
		Create an extraordinary UI	FAQ Blogs
			Do and Don'ts and related conditions before donations
			Certificate of participation
			Review system for blood bank & Hospital
			Displaying type of plasma

3 Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

3.3 Proposed Solution

Solution description:

This proposed system aims at connecting the donors & the patients by an online application. By using this application, the users can either raise a request for plasma donation or requirements. The basic solution is to create a centralized system to keep a track on the upcoming as well as past Plasma Donation Events.

Novelty:

A User Interface is simple for users to understand. We can use the application anywhere anytime. The user immediately needs the plasma for their treatment but the plasma is not available in nearby hospitals, then user can use this application to raise request and directly contact the donor, request them to donate the plasma. Today many of them have mobile phones they can install this application and use it to save the lives of people.

Customer satisfaction:

Effect of donor motivation on donor satisfaction and loyalty are variable due to the influence of common donorship attitudes prevailing in donor population, impact of social marketing programs, focused on promotion of donor commitment and deliberate donorship. Thus, we have predicted that effect of donor motivation on donor relationship satisfaction and loyalty change.

Business model:

This application is accessible by everyone. It is free. Because of the trouble in finding givers who match a specific blood bunch, this application empowers clients to enlist individuals who wish to give plasma and keep their data in a data set. Nowadays the need for plasma increases. Anyone with basic knowledge can access this app.

Scalability of the solution:

This application helps users to find plasma donors by sitting in home itself instead of searching donors everywhere. When there is a emergency then plasma

request to send to everyone. Once the donor is ready to donate receiver is notified about donation. Receiver can contact the donor. With this app donor can know the eligibility to donate and making it easier to locate suitable donor at right time.

3.4 Problem Solution fit

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS <ul style="list-style-type: none"> Patients A person who needs plasma Hospital management person for their patients 	6. CUSTOMER CONSTRAINTS CC <ul style="list-style-type: none"> The main constraint is lack of plasma donors Device availability Network connection Knowledge about application usage 	5. AVAILABLE SOLUTIONS AS <ul style="list-style-type: none"> Plasma donors and needers want to be in a connect within a common platform Make the awareness about plasma donation 	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P <ul style="list-style-type: none"> Information needs to be collected about physical qualification of person who can give plasma donation for shortlist the registration Proper instruction must be given for the donors while they give plasma Data collected from users must properly and securely stored 	9. PROBLEM ROOT CAUSE RC <p>Only few peoples know about importance of plasma donation so lack of plasma donors is main reason</p>	7. BEHAVIOUR BE <ul style="list-style-type: none"> This system worked with the help of data that are stored in database about donors Find the right donor for plasma donation 	Focus on J&P, fit into BE, understand RC
Identify strong TR & EM	3. TRIGGERS TR <p>The highest need of plasma can trigger the peoples to use the plasma donor application widely</p>	10. YOUR SOLUTION SL <p>Connect the peoples in a common platform</p> <p>Spreading knowledge about plasma donation and connect more number of people in this common medium</p>	8. CHANNELS of BEHAVIOUR CH <p>8.1 While users on online they can register with our details, they can put request for plasma and they can check for nearest people</p> <p>8.2 Cloud is based on internet connection so While user on offline they can only see their registered details on application</p>	Identify strong TR & EM
	4. EMOTIONS: BEFORE / AFTER EM <p>Now a days plasma is mostly required one like blood and other things for many treatments</p> <p>There is less awareness about plasma donation</p> <p>After this app launched plasma donors can easily found</p>			

4.REQUIREMENT ANALYSIS

4.1 Functional requirement

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story/Sub-Task)
FR-1	User Registration	Registration through website
FR-2	User Confirmation	Confirmation via mail
FR-3	User Login	Login using Registered mail id
FR-4	Sent Request	If Plasma is required, the receiver will contact the donor.
FR-5	Contact Donor	Contact the donor directly if a phone number is given.
FR-6	View Donation Camps	View the list of donation camps happening nearby.

4.2 Non-Functional requirements

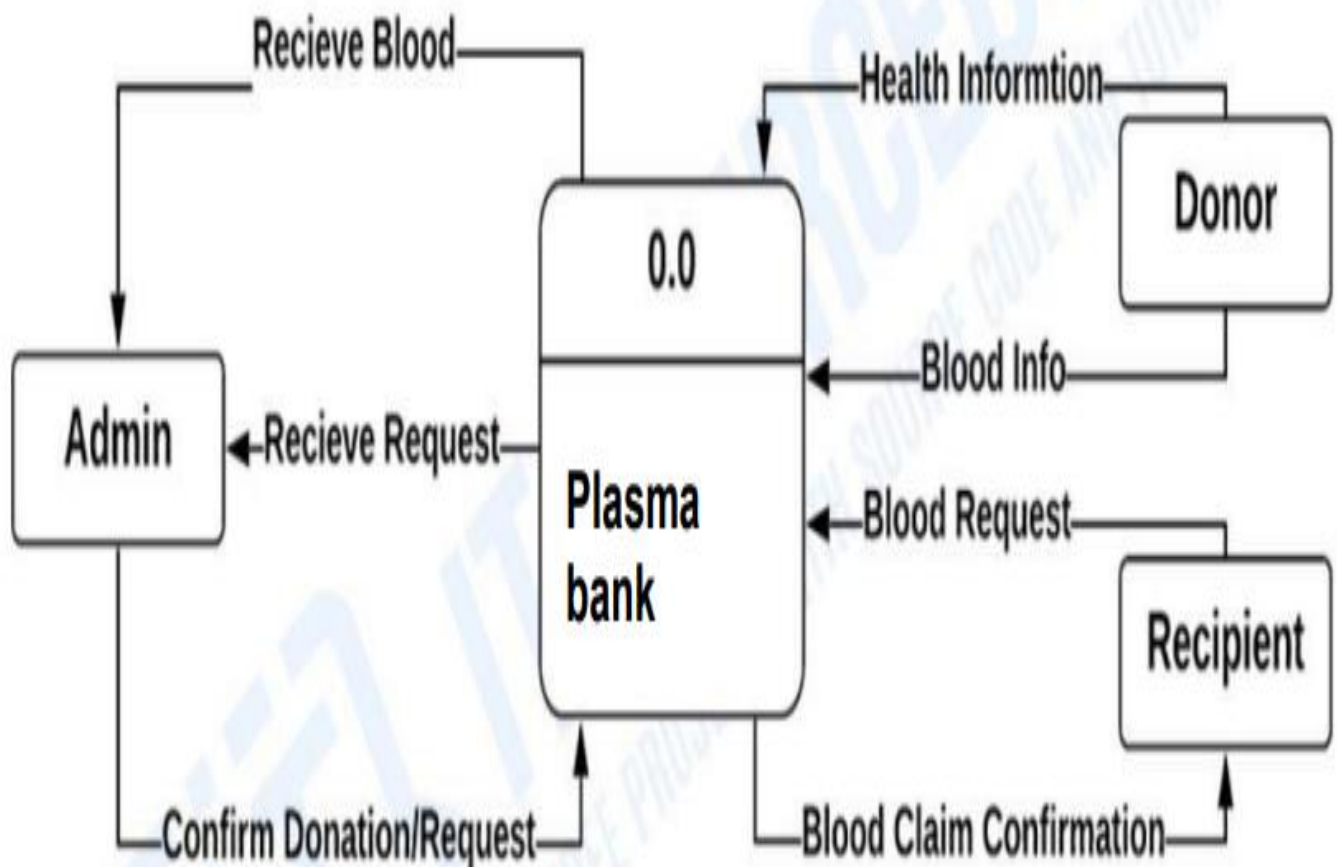

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The user interface of the plasma donor system must be well-designed and welcoming.
NFR-2	Security	Data storage is required by security systems, just like it is by many other applications. Databases are able to keep all the donor information that is viewed by applications. It must be secured with email Id and password.
NFR-3	Reliability	The system has the ability to work all the times without failures apart from network failure. A donor can have the faith on the system. The authorities will keeps the privacy of all donors in a proper manner
NFR-4	Performance	The Plasma donor System must perform well in different scenarios. The system is interactive and delays involved are less.
NFR-5	Availability	The system, including the online components, should be available 24/7.
NFR-6	Scalability	The system offers the proper resources for issue solutions and is designed to protect sensitive information during all phases of operation.

Solution Architecture :-

Technical Architecture :-

5.3 User Stories

The below template is used to list all the user stories for the product.

User type	Functional Requirement (Epic)	User Story Number	User story / Task	Acceptance criteria	Priority	Release
Donor	App Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account/ dashboard	High	Sprint-1
	Login	USN-2	As a user, I can log into the application by entering email & password	I can receive confirmation email & click confirm	High	Sprint-2
	Register for Donate	USN-3	As a user, I can log into the application and find the current bank to donate plasma and confirm my booking	I can register & access the dashboard with Facebook Login	Medium	Sprint-3
Patient/Doctor	Find the Bank	USN-4	As a patient, I can directly access the application and find the plasma available bank	I can access my account / dashboard	High	Sprint-1,2
	Request for Plasma	USN-5	As a user, I can enter into the application and find the current bank and request for plasma and state the emergency	can register & access the dashboard with Facebook Login	Medium	Sprint-3
Administrator	Maintain the applications	USN-6	As Administrator I can log into the application by entering email & password and maintaining details for users	I can access my account / dashboard	High	Sprint-3
	Connect the Bank with users	USN-7	As Administrator, i can hold the good communication between bank and user	I can access my account / dashboard	Low	Sprint-4
	Maintain Database	USN-8	As Administrator I can hold the exact details of donor and patient and also bank for requesting and available of plasma	I can access my account / dashboard	Medium	Sprint-4
Plasma Bank	Connect the Bank with users	USN-7	As Bank, I can hold the good communication between Administrator and user	I can access my account / dashboard	Medium	Sprint-3
	Maintain Database	USN-8	As Bank I can hold the exact details of donor and patient and also bank for requesting and available of plasma	I can access my account / dashboard	High	Sprint-4
Bot	Help the user my bot message in application	USN-9	As AI bot, I can hold the good communication between bank and user also help the user	I can access my account / dashboard	Medium	Sprint-4

6.PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User story/Task	Story Points	Priority
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High
Sprint-1		USN-2	As a user, I will receive confirmation mail once I have registered for the application.	1	High
Sprint-2		USN-3	As a user, I can register for the application through Facebook.	2	Low
Sprint-1		USN-4	As a user, I can register for the application through Gmail.	2	Medium
Sprint-1	Login	USN-5	As a user, I can log in to the application by entering email & password.	1	High
Sprint-3	Dashboard	USN-6	As a user, I can find the compatible donor by registering.	3	High
Sprint-3		USN-7	As a user, I can find the donor availability by logging in.	3	High
Sprint-2		USN-8	As a user, I can create a profile by registering.	2	Medium
Sprint-3		USN-9	As a user, I can see the demand of plasma.	3	Medium
Sprint-4	Database	USN-10	As a user, I can store the availability and need of plasma information value.	4	High

6.2 Sprint Delivery Schedule:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points completed (as on planned End date)	Sprint Release Data (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6.3 Reports from JIRA:

The screenshot displays the JIRA interface for the 'Plasma Donor Application' project. The left sidebar shows navigation options like Summary, Board, List, Calendar, Timeline, Forms, Pages, Issues, Reports, Add shortcut, Project settings, and Give feedback. The main area shows a 'List' view of tasks with columns for Type, Key, Summary, Status, Category, Assignee, Comments, Due date, Priority, and Labels. The tasks listed are:

Type	Key	Summary	Status	Category	Assignee	Comments	Due date	Priority	Labels
Task	PLAS-3	Registration page which collect needed address from users	TESTING		E.Empire	Comments	Nov 18, 2022	High	
Task	PLAS-4	Donor login page where user can also reedit his details	TESTING		Anand Raj D P	Comments	Nov 18, 2022	High	
Task	PLAS-5	Database management for maintain all users details	TESTING		Joshih pravitha V T	Comments	Nov 18, 2022	High	
Task	PLAS-6	Notification handling inside the portal	IN PROGRESS		Anand Raj D P	Comments	Nov 19, 2022	High	
Task	PLAS-1	Authentication done with personal details of users	DEVELOPMENT		Anand Boojesh R S	Comments	Nov 19, 2022	High	
Task	PLAS-2	Blood group search portal	DEVELOPMENT		Joshih pravitha V T	Comments	Nov 19, 2022	High	

At the bottom of the task list, there is a '+ Create' button.

7.CODING & SOLUTIONING

CODING

Login.html:

- The login page allows a user to gain access to the application by entering their username and password.
- There are two possible results during login :
 - Authentication is successful and the user is directed to the landing page
 - Authentication fails and the user remains on the login page. If authentication fails, the screen should show an informational or error message about the failure.

Signup.html :

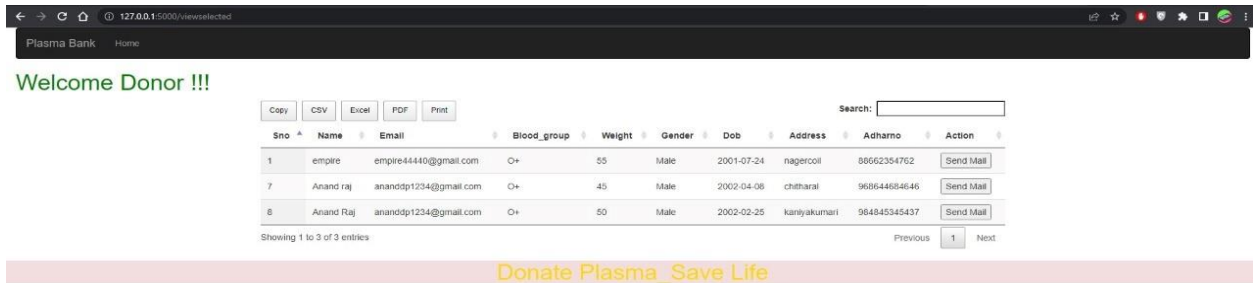

- A signup page (also known as a registration page) enables users and organizations to independently register and gain access to the system.
- It is common to have multiple signup pages depending on the types of people and organizations you want to register.

[illegible]

[illegible]

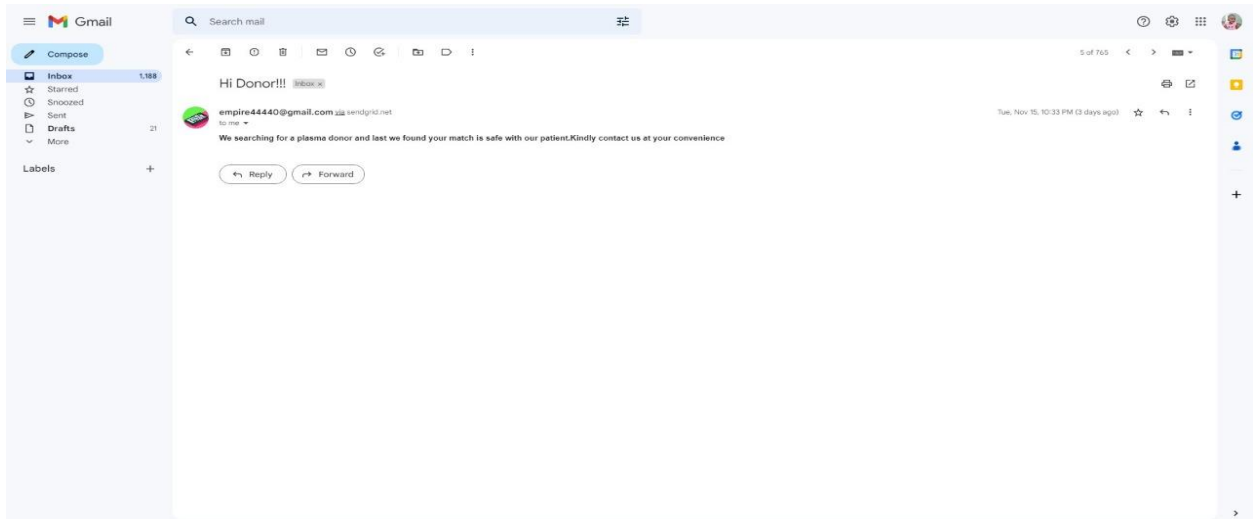

7.1 Feature 1

- Various buttons used are : Copy , CSV, Excel, PDF, Print
- These buttons enable the users to download the details for further offline purposes .

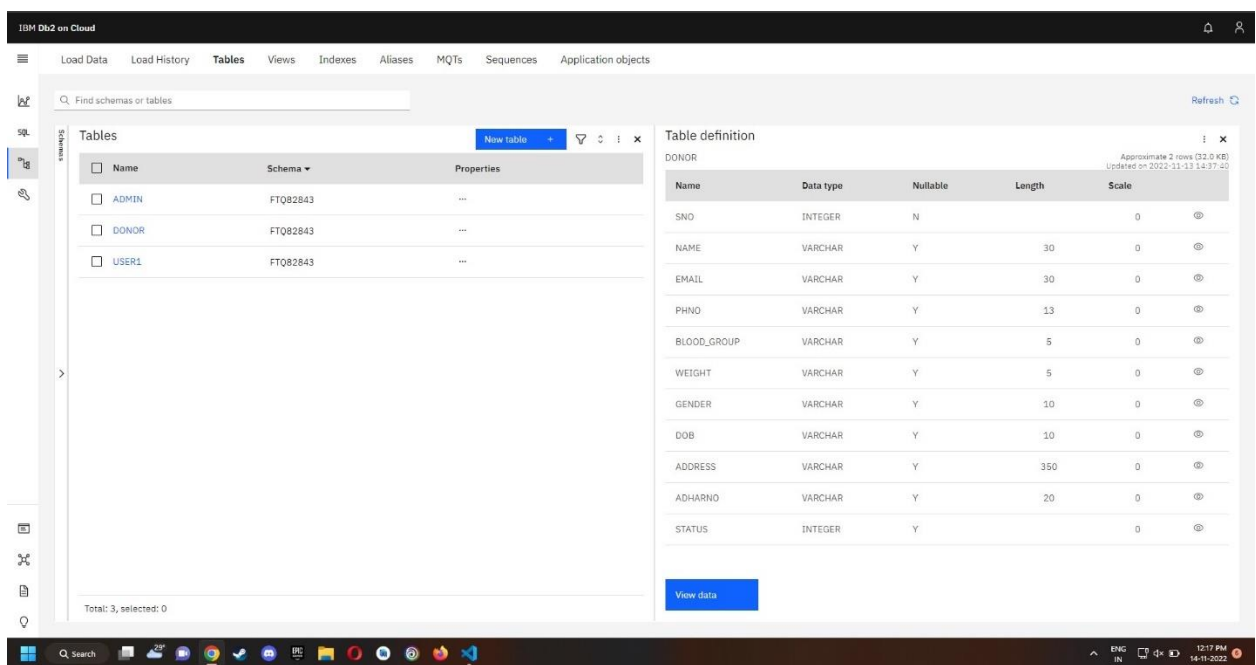

7.2 Feature 2

- Using SENDGRID , the feature that sends verification E-Mails to the users is been made available .
- This feature helps in the Verification of the user's Mail id

7.3 DATABASE SCHEMA

A database schema defines how data is organized within a relational database; this is inclusive of logical constraints such as, table names, fields, data types, and the relationships between these entities. Schemas commonly use visual representations to communicate the architecture of the database, becoming the foundation for an organization's data management discipline. This process of database schema design is also known as data modeling. These data models serve a variety of roles, such as database users, database administrators, and programmers. A database schema is considered the “blueprint” of a database which describes how the data may relate to other tables or other data models. However, the schema does not actually contain data.

8.2 Performance Testing

Login page :

- The login page allows a user to gain access to the application by entering their username and password.
- The user can also access the page sometimes by authenticating using a social media login.

Register page:

- Registration only happens the first time user access the system. It is a way to check their credentials. Every time after the initial registration, the user will log on to the system using the username and password you created.

Donor Page:

8.3 User Acceptance Testing

- Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	10	4	2	3	20
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	11	2	4	20	37
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	24	14	13	26	77

- Test Case Analysis :

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	7	0	0	7
Client Application	51	0	0	51
Security	2	0	0	2
Outsource Shipping	3	0	0	3
Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

9. RESULTS

9.1 Performance Metrics

- User Satisfaction

The application performance index, known as the Apdex score, is now an industry standard for tracking an application's relative performance.

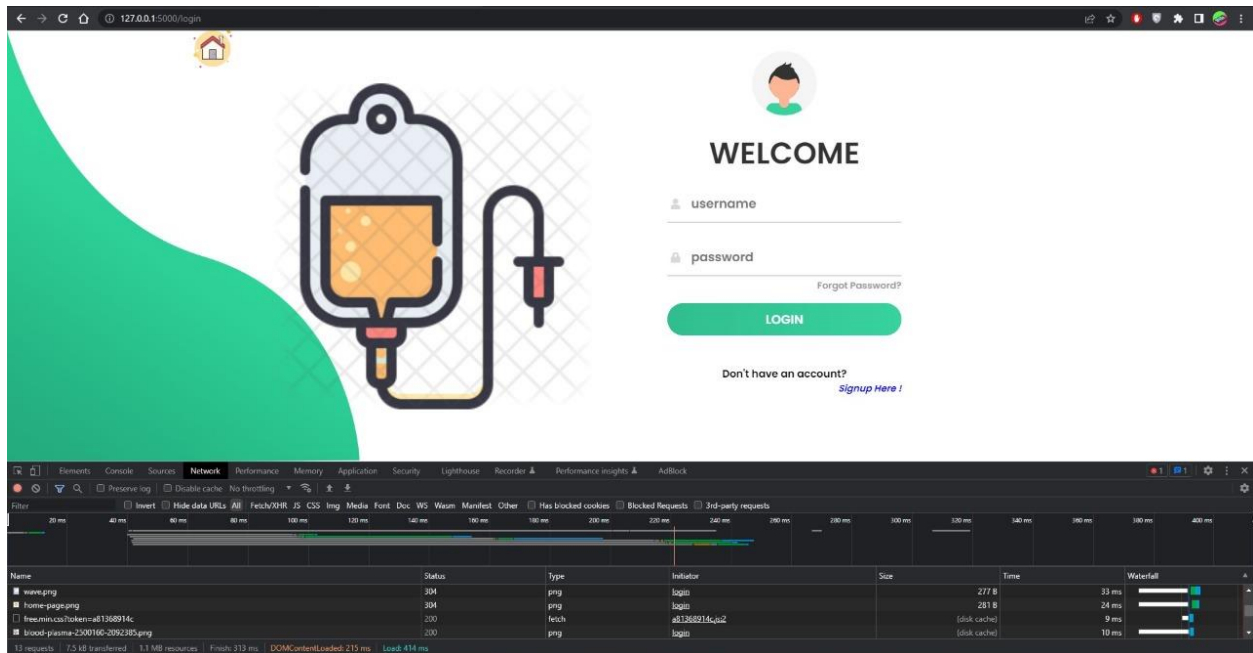

It functions by stating a goal for how long a specific application transaction or request must take. Those transactions are then labeled as failed, too slow, tolerating (sluggish), or satisfied (fast) requests.

- Time to Interact

This indicator measures how much time elapses before a page is fully interactive, meaning the first contentful point takes place, event handlers are registered for most of the visible elements, and the website reacts to user action.

- Speed Index

Speed index is another metric that relates to the user experience specifically, to when and what the visitor sees. Speed index is an indicator of how readily the above-the-fold content appears on a screen. It is sensitive to the quality of the web connection and the size of the viewpoint. This makes it an essential part of optimizing web applications for different screen sizes.

10. ADVANTAGES & DISADVANTAGES

ADVANTAGES:-

Whenever an individual has a cut or injury, these clotting factors ensure that they do not lose too much blood. Plasma donations ensure that these individuals can receive a plasma transfusion to supplement their body's clotting ability and stop excessive bleeding from occurring.

Some of the advantages of the application include :

- It is a user-friendly application.
- It will help people to find plasma easily.
- App already filters the Active Members.
- Here a User can be a giver as well as a borrower.

DISADVANTAGES:-

Some of the disadvantages of the application include :

- Wrong inputs will affect the project outputs.
- It cannot auto verify user genuineness.
- Internet Connection is mandatory.

11. CONCLUSION

The Plasma donor application was developed out of a need to make finding plasma supplies or a willing donor on time and using lesser time in searching for either of the two. This system should be made available to everyone because it will help the search of plasma supplies during emergency cases faster. This helps to avoid health complication and also possible deaths due to delays in search of Plasma.

An Plasma Donor application is an exclusive suite of services for people who are in need of Plasma. It helps you track all the details about the Plasma Donors. The basic solution is to create a centralized system to keep a track on the upcoming as well as past Plasma Donation Events.

12. FUTURE SCOPE

In future, our algorithm more congenial with more features such as

- The analysis such as Frequently requested zone or hospital for Plasma, Number of donors, mostly asked Blood Group, Age group of Patients need for plasma etc. can be added as additional features.
- The application can be implemented using Artificial Intelligence and Deep Learning Algorithms.
- NGOs and NCC Units information's can be made available in the application.
- Donors last donated details can be automatically updated in the App.
- Notification to Donors about the nearest Plasma Donation Center.
- Increase efficiency and customer satisfaction with an app aligned to their needs.
- Seamlessly integrate with existing infrastructure.
- Chats: Equip Plasma Donor app with a bot that can understand and answer all user queries and address their needs.
